The screenshot shows an IDE with the following components:

- EXPLORER:** A file tree on the left showing the project structure. The 'stores' folder is expanded, showing 'stores.service.ts', 'stores.spect.ts', 'stores.ts', 'stores-list.comp...', and 'stores-list.comp...'. The 'stores-list.comp...' file is selected.
- SOURCE:** The source code for 'StoresListComponent' is displayed. It shows the component's selector, standalone status, imports, templateUrl, and the ngOnInit method.
- TERMINAL:** The terminal output shows the command 'ng build' being executed. The output indicates that the application bundle generation is complete, with a size of 6.229 seconds. It also shows the file sizes for the main server, server, and polyfills server.

```

1 import { Component, OnInit } from '@angular/core';
2 import { CommonModule } from '@angular/common';
3 import { StoreService } from '../stores/store.service';
4 import { Store } from '../models/store.model';
5
6 @Component({
7   selector: 'app-stores-list',
8   standalone: true,
9   imports: [CommonModule],
10  templateUrl: './stores-list.component.html'
11 })
12 export class StoresListComponent implements OnInit {
13   stores: Store[] = [];
14   loading = true;
15
16   constructor(private storeService: StoreService) {}
17
18   ngOnInit(): void {
19     this.storeService.getStores().subscribe({
20       next: (data: Store[]) => {

```

main.server.mjs | main.server | 81.46 kB |
server.mjs | server | 1.79 kB |
polyfills.server.mjs | polyfills.server | 243 bytes |

Application bundle generation complete. [6.229 seconds]

Match mode enabled. Watching for file changes...
NOTE: Raw file sizes do not reflect development server per-request transformations.
